

Scenario #1

Ambience: night, dark and clear, 60 degrees

You respond to a crash scene where you contact a subject who tells you that he fell asleep while driving. Your investigation shows that the driver was not injured but was speeding and failed to negotiate a curve. When you ask the subject his name he tells you but then he continues telling you that his name is wrong on his enrollment papers at the local gym because he is adopted. He continues by telling you that he has never met his birth parents but was going to use their name for a while but has since changed his mind so the name on his driver's license is correct but the address isn't. He further advises that he is in the process of moving because he doesn't like the neighbors and that they are always watching him. He tells you that he doesn't know where he will move to, but probably in with his parents.

You notice that the subject seems to be fidgeting, restless and can't stand still. His speech is clear, but quick and off topic. His pupils look big. You ask the subject to do SFSTs and he agrees. There were no clues detected for HGN or VGN and LOC was not present. When completing the WAT test, his movements were stiff and his steps are very quick and punctuated by slamming the heel of the front foot into the toe of the back foot. Two clues were observed; starts too soon and an improper turn. On the OLS test, he counted to 1042 in 30 seconds, displayed leg and body tremors, and put his foot down twice while attempting to balance. The subject had difficulty performing the MRB Test. He estimated 30 seconds in 22 seconds, and swayed quickly side to side.

The subject denies any drug use at first but later tells you he did take something for his sore throat the day before. You notice again that he can't stand still and ask why. He tells you that he is afraid of the police because he watches Cops on TV and that Chicago PD used to be his favorite show. He further advises that he watches Breaking Bad reruns now because that's a better show but he can't watch it now because he is moving and had his cable turned off. He also tells you he is moving because his neighbors watch him all the time and one of them may have been following him when he wrecked.

Scenario #2

Ambience: night, dark with street lights, 60 degrees with light rain

You stop a young lady for failing to obey a traffic control device at 0115 hours. When you contact her you see that her pupils look big. She responds to your questions, but slowly. You determine that she lives in the area, and you ask her if she knows that she failed to stop at the red light. She tells you no, she didn't see it, and looks at you with a glare. She is wearing shorts and a tank top and you notice that she has goose bumps on her arms. As you talk to her, she asks you repeatedly to turn off your patrol vehicle overhead lights. Every time she hears radio traffic from your portable radio, she looks at you glaringly and complains about your flashing lights. She then tells you that she can't stay in the car and she gets out.

You ask her why she can't stay in the car and she tells you it's because there are things crawling around in the car. You observe nothing in the car. You ask her to do SFSTs and she agrees. No HGN, VGN or a LOC is observed. You do observe three clues on the WAT test; starts too soon, incorrect number of steps and uses arms for balance. On the OLS test, she tells you that there are things crawling around on the ground and doesn't want to do the test. The subject did complete the MRB test, but swayed badly side to side and front to back. She estimated 30 seconds in 15 seconds.

She continues to complain about the lights from your patrol vehicle, which are not on, and continues to describe things crawling around in her car. She advises that she is not under a care of a doctor and not taking any medication. However, she does admit being at a concert earlier in the evening and may have taken something a friend gave her to help her enjoy the music better.

Scenario #3

Ambience: afternoon light; 75 degrees and overcast

You observe a vehicle speeding and while you are behind it, you notice that it is traveling straight, but on the center divider line. You contact the driver and find him wearing a light jacket over a sweat shirt even though it is a warm afternoon. During the contact the subject answers your questions, but appears to be acting very tired. When you inquire about his demeanor, the subject advises that he works nights and didn't get much sleep the day before. He denies taking any medication or drugs.

As you talk with the subject you notice that he has small smears of blood on his hands and small blood stains on his pants. You ask about them and he tells you that he scratched the top off a scab and it bled. You also notice that his voice is soft, low and raspy. You note that the subject is continuously licking his lips and has a dry mouth.

You notice that the subject's pupils are very small. You ask him to do SFSTs and he agrees, but wants to know why. You tell him that you want to make sure he is okay to drive since he is claiming to be tired. Upon completion of the SFSTs you have observed no clues of HGN and the subject did not have a LOC. You did observe two clues on the WAT; stops while walking and incorrect number of steps. The subject's movements are very slow and deliberate. Two clues were observed during the OLS test; uses arms to balance and puts foot down. You also note that he counted to 21 at the end of 30 seconds. On the MRB test, the subject was swaying front to back, and estimated the passage of 30 seconds in 42 seconds.

Scenario #4

Ambience: afternoon light, 80 degrees, bright and sunny

You observe a van with a defective brake light and a roll of carpet in the back sticking out that is not properly secured. While you are behind the vehicle you notice some lane weaving and you initiate a traffic stop. After activating your emergency lights you notice that the driver is slow to pull over.

You contact the driver of the vehicle and confirm that he is a carpet installer and has just completed one job and is on his way to the next. He is wearing jeans and a work shirt with carpet adhesive spots on it. You can smell a chemical odor coming from the van as you stand at the window. When you ask him about the smell he tells you it is the adhesive. You ask the driver why it took him so long to stop. He tells you he didn't see you, and that he doesn't normally drive this van, and that the mirrors aren't adjusted properly.

When you ask the subject for his license, registration and proof of insurance he gives you his license, but forgets the other documents. You remind him and he starts to look again, but forgets what he is doing when you ask him where he is going. He pauses and then gives you the full address. You notice that his speech is slurred and hard to understand at times.

You ask the driver to do SFSTs and he agrees. After he gets out of the vehicle you see that he has a significant amount of adhesive on his clothes and hands. You ask him about it and he says he spilled the can at this last job. He tells you that he used an industrial cleaner to clean it up and the cleaner gave him a headache.

During the SFSTs, you observed six clues of HGN. You observed eight clues for the WAT, and four clues for the OLS. Several times he nearly fell and used the side of his van to steady himself during the OLS test. On the MRB test the subject swayed side to side and front to back by approximately 2 inches. He also estimated 30 seconds in 38 seconds. You also noted that the subject had a LOC.

Scenario #5

Ambience: early morning, daylight; 45 degrees with a light mist, almost fog

You are dispatched to a one vehicle crash where the driver ran off the roadway and into a ditch on a relatively straight, heavily traveled, but well maintained road. As you arrive you are advised that the driver of the vehicle is in the middle of the road trying to hit cars with a board and appears very agitated.

When you arrive you find the alleged female driver standing in the middle of the road wearing only a t-shirt and underpants. She appears agitated and is sweating profusely. She is bleeding slightly from the forehead, but other than that, appears to be uninjured.

You make contact with her and she does not respond to your verbal commands and pays very little attention to you. You see that the palms of both her hands are bloody from the board she is carrying, but she doesn't seem to notice the bleeding. You finally get her attention and ask her name, what she is doing, and what happened. She stares at you, but does not respond to your questions. You tell her to put the board down and she continues to stare at you. You ask her where her clothes are and she tells you that she is hot and didn't need them.

After taking the board away from her, she tells you her name and eventually tells you that she is mad at the cars because no one will stop to help her. After you determine that she is the driver of the vehicle, you ask her to do SFSTs. However, she just looks at you and makes no response. You finally get her to do the HGN test and you observe all six clues plus VGN. You also observe LOC. She agrees to do the WAT test where you observed all eight clues. You notice that her movements are very slow and rigid-like. You observe three clues on the OLS test, and again her movements are slow and rigid-like. On the MRB test the subject did not close her eyes and was very stiff and rigid. She estimated 30 seconds in 48 seconds. Her responses to your questions were delayed, and she had to concentrate very hard to complete them.

EMS advises you that they are going to transport the subject to the hospital. She becomes obviously annoyed, starts yelling, and is visibly upset, and transported to the local hospital.

Scenario #6

Ambience: late evening, dark; 40 degrees and raining

You stop a vehicle for failing to maintain a single lane of travel. You contact the driver and find that there are several people in the car, and the driver is talking on a cell phone. You have to instruct her to end her call when you make your contact with her. You ask the driver for her license and registration and she provides them, but she asks you twice what you have asked for. You can see her pupils are large and her eyes appear to be red and bloodshot. She doesn't seem to be overly concerned about being stopped, and does not give you her full attention. She is easily distracted by her passengers who are laughing, making various comments, and asking you irrelevant questions.

You ask the subject to exit the vehicle and ask her additional questions. She responds appropriately, but laughs several times, and several looks back at the car between each question. At one point she turns away from you and waves to the passengers in the vehicle and makes faces at them.

She denies any alcohol or drug use. You ask her to perform SFSTs and she agrees and tells you that she hasn't been drinking. During the SFSTs you observe no clues of HGN or VGN. However, you do observe a LOC. You also notice that her pupils still appear to be large and bloodshot. During the WAT test the subject displays four clues; uses arms for balance, misses heel-to-toe, stops while walking, and she made an improper turn. Several times she stopped and asked questions about the test and asked what she was supposed to do. During the OLS test, she swayed while she balanced and you observed that her pant legs and her shirt were trembling indicating body tremors. During the tests she laughed out loud numerous times. After completing them, she asked if her passengers could do the same tests. On the MRB test she had a side to side and front to back sway of about 3 inches. She estimated the passage of 30 seconds in 38 seconds and had noticeable eyelid tremors. During the tests you observed a marijuana-like odor coming from her clothing.

Scenario #8

Ambience: night, dark; 75 degrees

You observe a vehicle fail to maintain a single lane of travel, make an improper lane change, and fail to yield to oncoming traffic when crossing through an intersection. You also observe that the vehicle's speed is inconsistent, and the vehicle is speeding up and slowing down for no apparent reason. After activating your emergency lights to stop the vehicle, the driver is slow to respond. The driver finally activates his turn signal when pulling to the shoulder of the roadway. When doing so, you notice that the vehicle's windshield wipers come on, and its headlights change from low beam to high beam.

You contact the driver and see that his eyes are bloodshot and watery, and his speech is slurred. He has difficulty finding his license and you finally have to point it out to him. When he hands his license to you he tells you that he is looking for a bathroom and somewhere to eat, and tells you that he is hungry.

He tells you he is from out of town and just left a friend's house, and is "a little lost." He then starts laughing. He forgets to provide you with the vehicle registration and when reminded, he gives you an envelope containing the warranty for his car tires. After several attempts, he produces the requested document. You note a local address on both documents.

You ask him to perform SFSTs and he agrees, but he accuses you of harassing him because he is from out of town. You notice that he has difficulty getting out of the car. During the HGN test, you observe a Lack of Smooth Pursuit in both eyes and Distinct and Sustained Nystagmus at Maximum Deviation. No other HGN clues or VGN are observed. You also observe a LOC and that his pupils appear to be large in size. You observe three clues during the WAT test; cannot keep balance, does not touch heel-to-toe, and an improper turn. You also notice that the subject has difficulty following your instructions. During the OLS test, the subject sways badly, puts his foot down several times, and you stop the test because he is in danger of falling. During the MRB test the subject swayed noticeably from side to side, had eyelid tremors, and estimated the passage of 30 seconds in 36 seconds. You administer a preliminary breath test and the reading is 0.06.
